

**The following applies only to those individuals who have received a positive COVID-19 PCR test result:**

**Re-testing after a COVID-19 PCR positive test**

If you have tested positive by PCR for COVID-19, you will probably have developed some immunity to the disease. However, it cannot be guaranteed that everyone will develop immunity, or how long it will last. It is possible for PCR tests to remain positive for some time after COVID-19 infection.

**Anyone who has previously received a positive COVID-19 PCR test result should not be re-tested within 90 days of that test, unless they develop any new symptoms of COVID-19.**

If, however, you have an LFD antigen test within 90 days of a previous positive COVID-19 PCR test, for example as part of a workplace or community testing programme, and the result of this test is positive, you and your household should self-isolate and follow the [stay at home guidance](#).

If it is more than 90 days since you tested positive by PCR for COVID-19, and you have new symptoms of COVID-19, or a positive LFD antigen test, or a positive PCR test, this should be considered as a possible new infection and you and your household should self-isolate and follow the steps in the [stay at home guidance](#).
